

CYBERSNOVA

PROJECT REPORT

Prepared by
NAMRATA RAVINDRA PAWAR.

Level 1=Beginner Level

PROJECT 1: NETWORK
RECONNAISSANCE & SERVICE
ENUMERATION

Field	Details
Full Name	Namrata Ravindra Pawar
Registration Number	CSN-SP-2026-155
Internship Domain	Cyber Security
Duration	1 month
Start Date	1 Sept 2026
End Date	30 Sept 2026
Mode	30 Sept 2026
Assigned Mentor	Internship Coordinator

2. Objective

Identify publicly accessible services, open ports, and application technologies on the authorized vulnerable practice target.

3. Target

- Target= testasp.vulnweb.com
- IP=44. 238. 29. 244
- Environment=Authorized
Acunetix/VulnWeb practice target

4. Tools Used

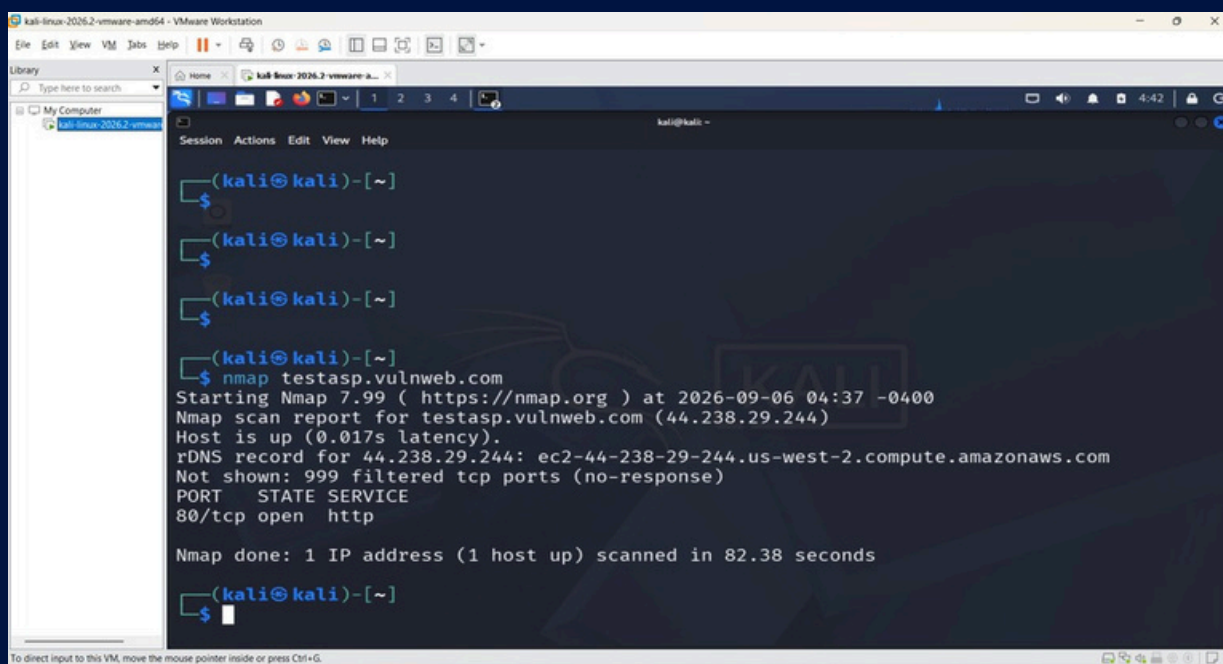

- Nmap 7.99
- WhatWeb 0.6.4
- Netcat
- Kali Linux

5. Commands Used

- Nmap — Port Scanning :

Nmap was used to identify the TCP ports that are accessible on the authorized target testasp.vulnweb.com. Port scanning is an initial reconnaissance step that helps determine which network services may be available for further analysis.

- command:
nmap testasp.vulnweb.com

```

(kali@kali)-[~]
$ nmap testasp.vulnweb.com
Starting Nmap 7.99 ( https://nmap.org ) at 2026-09-06 04:37 -0400
Nmap scan report for testasp.vulnweb.com (44.238.29.244)
Host is up (0.017s latency).
rDNS record for 44.238.29.244: ec2-44-238-29-244.us-west-2.compute.amazonaws.com
Not shown: 999 filtered tcp ports (no-response)
PORT      STATE SERVICE
80/tcp    open  http
Nmap done: 1 IP address (1 host up) scanned in 82.38 seconds
(kali@kali)-[~]
$
```

• Nmap — Service & Version Detection

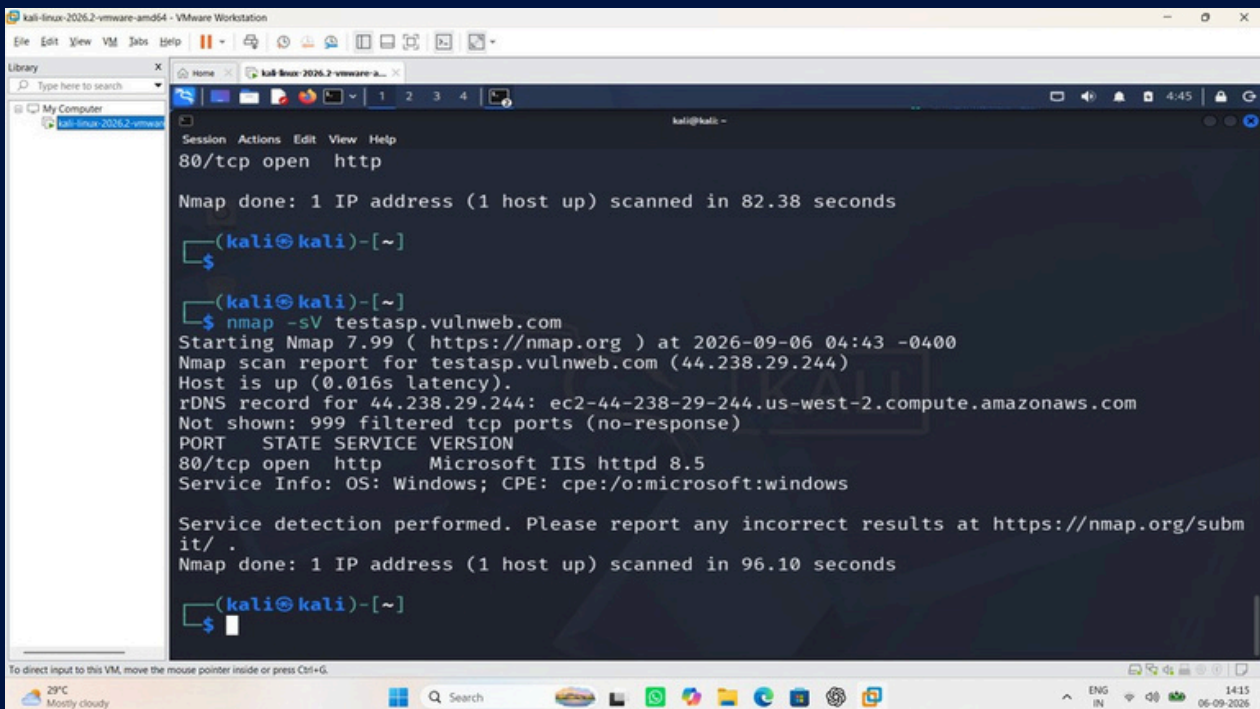

After identifying the open port, Nmap service and version detection was used to determine which web server technology was running on port 80.

The scan identified:

1. 80/tcp — open
2. Service — HTTP
3. Web server — Microsoft IIS 8.5
4. Operating system information — Windows

This information provides a better understanding of the technology exposed by the target's web service

- command:
`nmap -sV testasp.vulnweb.com`

```
kali@kali: ~$ nmap -sV testasp.vulnweb.com
Nmap done: 1 IP address (1 host up) scanned in 82.38 seconds

(kali@kali)~$
(kali@kali)~$ nmap -sV testasp.vulnweb.com
Starting Nmap 7.99 ( https://nmap.org ) at 2026-09-06 04:43 -0400
Nmap scan report for testasp.vulnweb.com (44.238.29.244)
Host is up (0.016s latency).
rDNS record for 44.238.29.244: ec2-44-238-29-244.us-west-2.compute.amazonaws.com
Not shown: 999 filtered tcp ports (no-response)
PORT      STATE SERVICE VERSION
80/tcp    open  http      Microsoft IIS httpd 8.5
Service Info: OS: Windows; CPE: cpe:/o:microsoft:windows

Service detection performed. Please report any incorrect results at https://nmap.org/submit/.
Nmap done: 1 IP address (1 host up) scanned in 96.10 seconds

(kali@kali)~$
```

• WhatWeb — Technology Identification

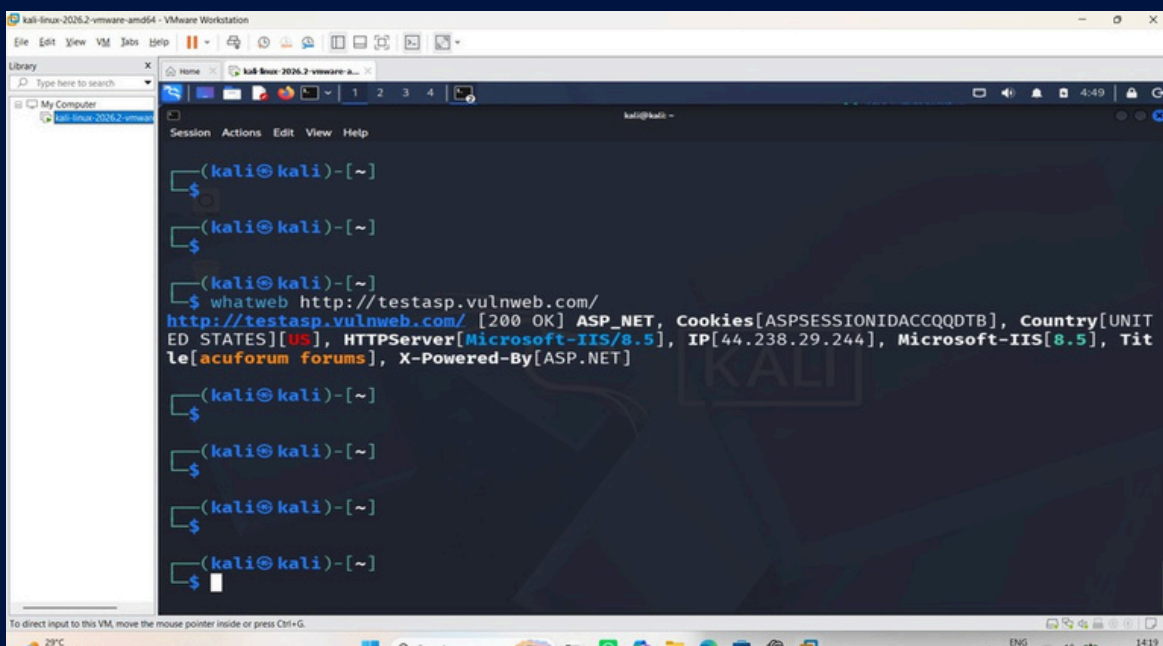

WhatWeb analyzed the HTTP response from the target and identified several technologies and characteristics.

The results included:

- HTTP status: 200 OK
- Web server: Microsoft-IIS/8.5
- Application technology: ASP.NET
- IP address: 44.238.29.244
- Cookie: ASPSESSIONIDACCQQDTB
- Page title: acuforum forums
- X-Powered-By: ASP.NET

The results from WhatWeb were consistent with the Nmap service detection and provided additional application-level information.

- command:
whatweb http://testasp.vulnweb.com/

```
kali@kali:~$ whatweb http://testasp.vulnweb.com/
http://testasp.vulnweb.com/ [200 OK] ASP.NET, Cookies[ASPSESSIONIDACCQQDTB], Country[UNITED STATES][US], HTTPServer[Microsoft-IIS/8.5], IP[44.238.29.244], Microsoft-IIS[8.5], Title[acuforum forums], X-Powered-By[ASP.NET]
```

- Netcat — HTTP Service Verification

The command connected to port 80 using Netcat and sent a basic HTTP GET request to the target.

The response confirmed:

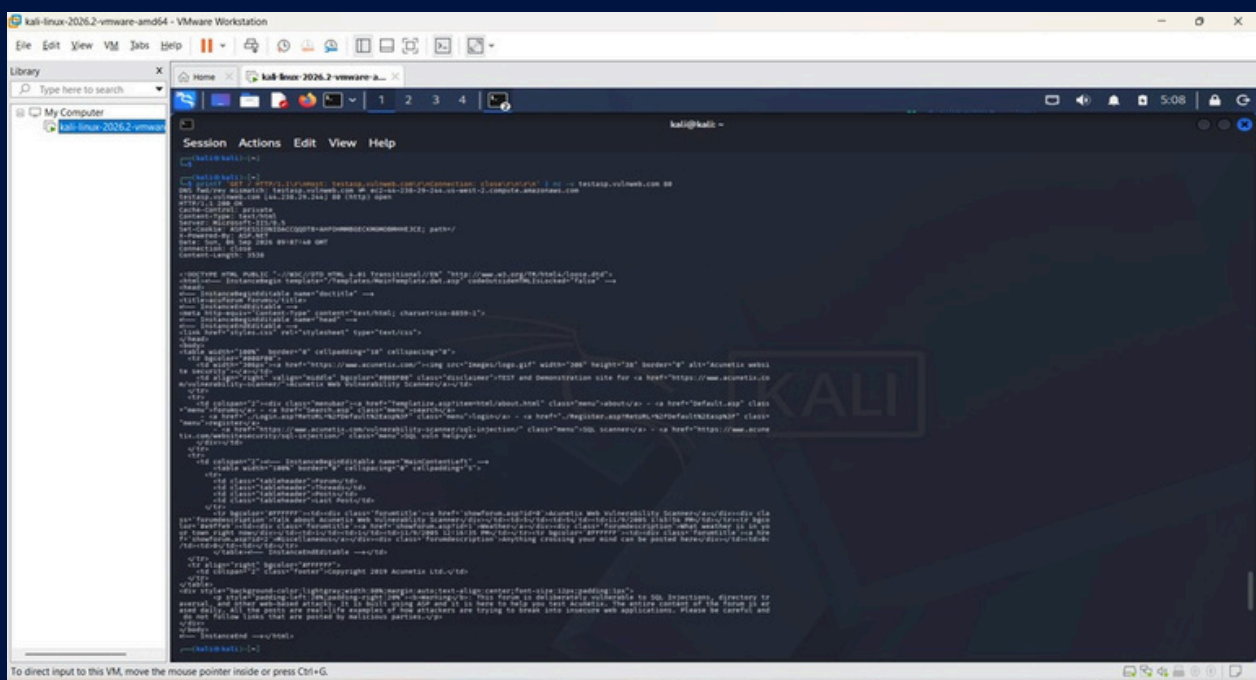

- Port 80 was reachable
- HTTP communication was successful
- HTTP response: 200 OK
- Server: Microsoft-IIS/8.5
- X-Powered-By: ASP.NET
- The server returned HTML content.

This provided direct confirmation that the HTTP service identified during the Nmap scans was accessible and responding to HTTP requests.

- command:

```
printf'GET / HTTP/1.1\r\nHost:
```

```
testasp.vulnweb.com\r\nConnection: close\r\n\r\n' | nc -v  
testasp.vulnweb.com 80
```

• Full TCP Port Scan

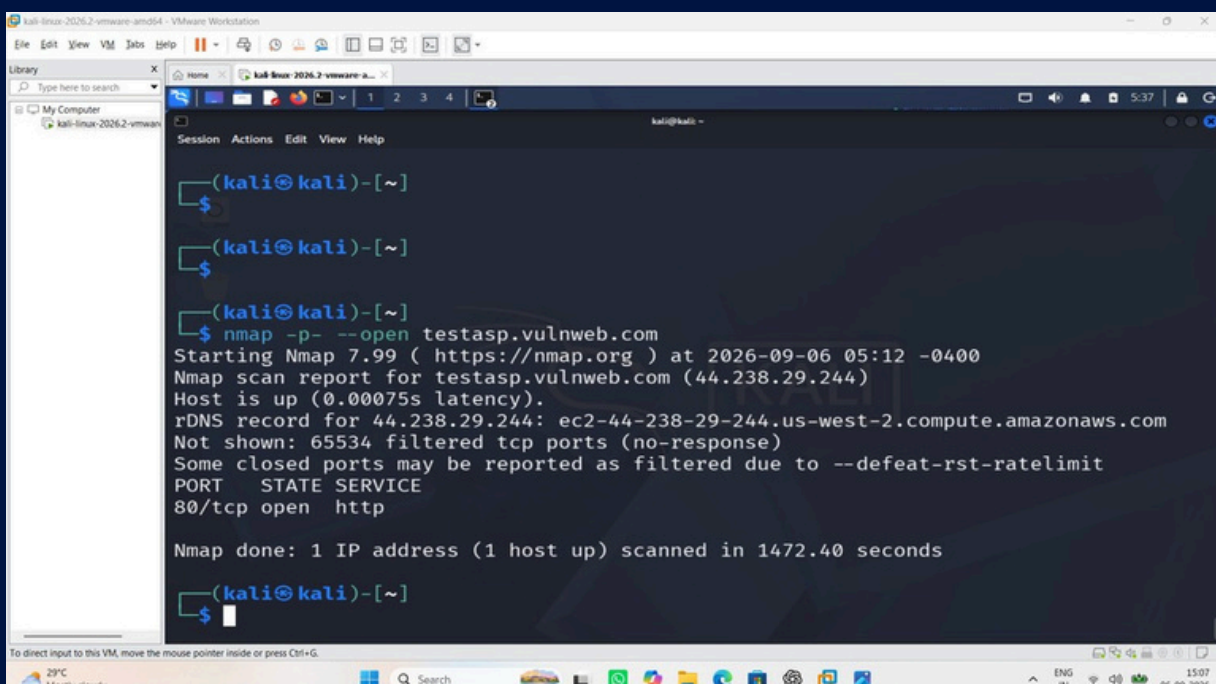

A full TCP port scan was performed to check the entire TCP port range rather than only the ports covered by a basic Nmap scan.

The scan identified:

- 80/tcp – open
- Service – HTTP
- 65,534 other TCP ports – filtered

This indicates that, from the perspective of this scan, port 80 was the only open TCP port discovered on the target.

- command:
`nmap -p- --open testasp.vulnweb.com`

```
(kali㉿kali)-[~]
$
(kali㉿kali)-[~]
$
(kali㉿kali)-[~]
$ nmap -p- --open testasp.vulnweb.com
Starting Nmap 7.99 ( https://nmap.org ) at 2026-09-06 05:12 -0400
Nmap scan report for testasp.vulnweb.com (44.238.29.244)
Host is up (0.00075s latency).
rDNS record for 44.238.29.244: ec2-44-238-29-244.us-west-2.compute.amazonaws.com
Not shown: 65534 filtered tcp ports (no-response)
Some closed ports may be reported as filtered due to --defeat-rst-ratelimit
PORT      STATE SERVICE
80/tcp    open  http

Nmap done: 1 IP address (1 host up) scanned in 1472.40 seconds
(kali㉿kali)-[~]
$
```

• Nmap Script & Service Enumeration

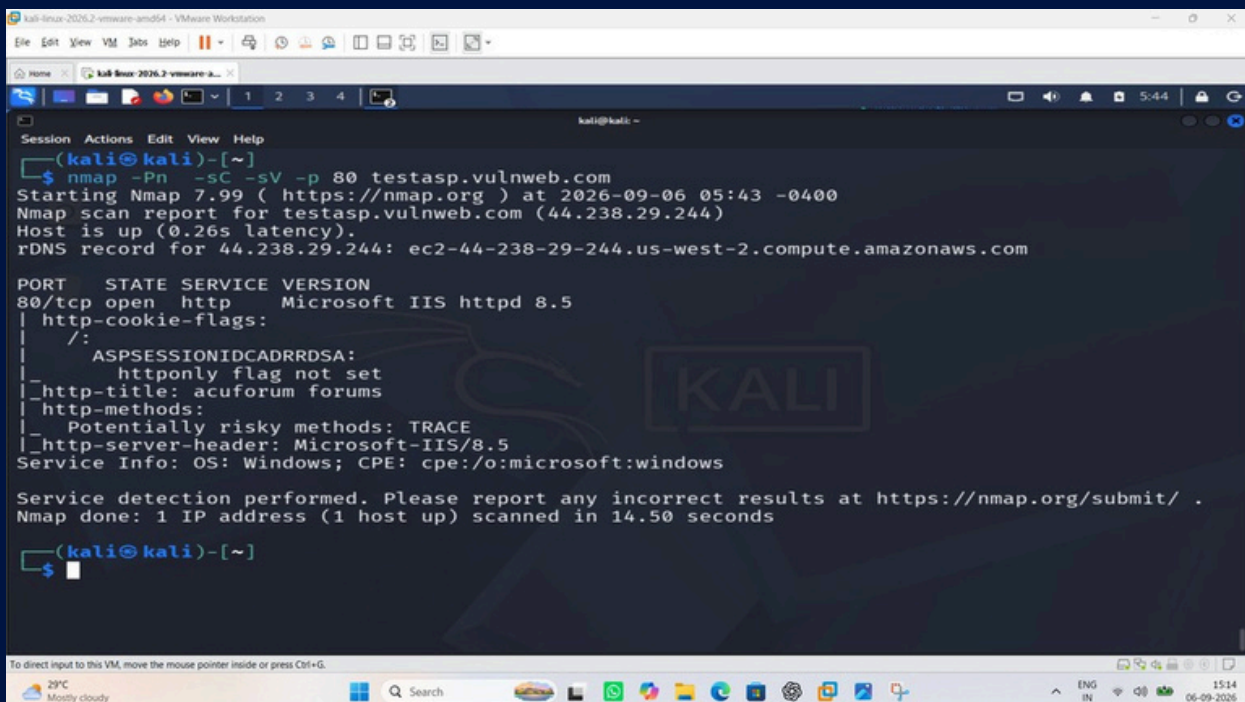

A final focused Nmap scan was performed against the confirmed open HTTP port to collect additional service and basic HTTP information.

The scan used several Nmap options:

- -Pn — performs the scan without relying on host discovery.
- -sC — runs Nmap's default set of scripts.
- -sV — performs service and version detection.
- -p 80 — limits the scan to port 80.

The scan again identified Microsoft IIS 8.5 running the HTTP service. The Nmap scripts also provided additional HTTP information.

- command:
`nmap-Pn-sC-sV -p 80 testasp.vulnweb.com`

```
kali@kali: ~  
$ nmap -Pn -sC -sV -p 80 testasp.vulnweb.com  
Starting Nmap 7.99 ( https://nmap.org ) at 2026-09-06 05:43 -0400  
Nmap scan report for testasp.vulnweb.com (44.238.29.244)  
Host is up (0.26s latency).  
rDNS record for 44.238.29.244: ec2-44-238-29-244.us-west-2.compute.amazonaws.com  
  
PORT      STATE SERVICE VERSION  
80/tcp    open  http      Microsoft IIS httpd 8.5

Nmap done: 1 IP address (1 host up) scanned in 14.50 seconds  
  
kali@kali: ~  
$
```

6. Findings

Port	Service	Technology
80/tcp	HTTP	Microsoft IIS 8.5
Other TCP ports	Filtered	No response detected

Additional fingerprinting identified ASP.NET, an ASP session cookie, and the page title “acuforum forums.”

7. Security Observations

- HTTP service is publicly accessible on port 80.
- Microsoft IIS 8.5 was exposed.
- Nmap identified the HTTP TRACE method as potentially risky.
- The ASP session cookie was reported without the HttpOnly flag.
- These observations should be treated as security findings requiring further validation, not automatically as exploitable vulnerabilities.

8. Conclusion

The reconnaissance successfully identified the target's publicly accessible HTTP service and its underlying web technologies.

Nmap's full TCP scan found port 80 as the only open TCP port, while WhatWeb and Nmap service detection identified Microsoft IIS 8.5 and ASP.NET.

Netcat confirmed successful HTTP communication with the target.
